INTRODUCTION

This report summarizes data compiled from original birth, death, stillbirth, induced abortion, marriage, and divorce records filed with the Section of Vital Statistics as required by law. Standard forms recommended by the National Center for Health Statistics are used for all records, with the exception of marriage and divorce.

Responsibility for the filing of the birth certificate lies with the hospital medical records personnel, the physician, midwife, or other attendant. Undertakers, or persons acting as such, are legally charged with filing death certificates and fetal death certificates. County Recorders are responsible for forwarding the original marriage certificates or computerized tapes containing marriage data to the Vital Statistics office for data collections. The County Clerk of each county is required to submit a Report of Decree of Divorce/Annulment to the Vital Statistics office for each occurrence in the preceding month. Induced abortion reports are completed and sent in directly by the physician, hospital, or clinic. The quality of data presented in the report is directly related to the completeness and accuracy of the information contained on the certificates.

Users of the publication are welcome to offer us their comments and/or suggestions. Comments or questions concerning format, content, technical aspect of the publication, or requests for additional data should be submitted to: Nevada State Health Division, Section of Vital Statistics, 505 E. King St., Rm. 102, Carson City, Nevada 89710.

THE NEVADA VITAL STATISTICS SYSTEM

The Nevada Section of Vital Statistics is composed of three distinct sections. 1) the Vital Records Section, 2) the Quality Control Section, and 3) the Data Entry Section. These three areas carry on a statewide system of registration, collection, and preparation of data and public services pertaining to births, deaths, induced abortions, marriages and divorces.

All vital events are first recorded by the local registrar in each county, who in turn forwards the original record or report to the Vital Statistics office. The Quality Control Section checks the certificates for accuracy and completeness before affixing a state file number. The certificate is then forwarded to the Data Entry Section where it is keyed and where statistical data tapes are initiated. The Program Assistant II is then responsible for the computer programs used to compile the data for this report. All formats and methodology used are compiled and edited by the Data Specialist.

DEFINITIONS

Abortion:	The termination of a human pregnancy with an intention other than to produce a live birth or to remove a dead fetus. (NRS 442.240)
Death:	A person who has sustained irreversible cessation of all functioning of the brain, including the brain stem, is dead.
Divorce:	Termination of a marriage.
Estimated Population:	Population base used in the calculation of rates was provided by Nevada Department of Taxation. Estimated populations are stated as of July 1, 1989.
Fetal Death:	Means a birth after at least 20 weeks gestation in which the child shows no evidence of life after complete birth. (NRS 440.070)
Hebdomadal Death:	Defined as a death occurring in the first 6 days of life.
Infant Death:	Deaths occurring to individuals of less than one year of age.
Live Birth:	A birth in which the child shows evidence of life after complete birth. A birth is complete when the child is entirely outside the mother, even if the cord is uncut and the placenta still attached. The words "evidence of life" include heart action, breathing, or coordinated movement of voluntary muscle. (NRS 440.030)
Low Birthweight:	A birth where in the birth weight is equivalent to 2500 grams or less. (5 lb. 8 oz.)
Marriage:	The mutual relation of husband and wife. The marriage is filed with the County Recorder in the county where the license was purchased.
Neonatal Death:	Death occurring to infants in the first 27 days of life.

Occurrence, County of:	Data allocated by place where the event actually occurred.
Perinatal Death:	Death occurring to a fetus of 20 weeks gestation or more plus infant deaths occurring under 28 days of life.
Prenatal Care:	The care received by the mother, from a health professional or midwife, during the length of the pregnancy.
Residence, County of:	The usual residence of the individual. For deaths, this is defined as the usual residence of decedent as indicated on the certificate; for births and fetal deaths, the residence is defined as the usual place of residence of the mother.
S.I.D.S:	Death due to Sudden Infant Death Syndrome.
Underlying Cause of Death:	That disease or condition which gave rise to the chain of morbid events leading to death or the circumstances of the accident or violence that produced the fatal injury.

FORMULAS FOR RATES

Abortion Rate	= $\frac{\text{Abortions}}{\text{Total Live Births}} \times 1,000$
Cause-Specific Death Rate	= $\frac{\text{Deaths from a Particular Cause}}{\text{Population}} \times 1,000 \text{ or } 100,000$
Crude Birth Rate	= $\frac{\text{Number of Births}}{\text{Population}} \times 1,000$
Crude Death Rate	= $\frac{\text{Number of Deaths}}{\text{Population}} \times 1,000 \text{ or } 100,000$
Divorce Rate	= $\frac{\text{Number of Divorces and Annulments}}{\text{Population}} \times 1,000$
Fertility Rate	= $\frac{\text{Number of Live Births}}{\text{Female Population (15-44)}} \times 1,000$
Fetal Mortality Rate	= $\frac{\text{Number of Fetal Deaths}}{\text{Total Live Births plus Fetal Deaths}} \times 1,000$
Infant Mortality Rate	= $\frac{\text{Number of Infant Deaths}}{\text{Total Live Births}} \times 1,000$
Low Birthweight Rate	= $\frac{\text{Number of Low Birthweight Births}}{\text{Total Live Births}} \times 1,000$
Marriage Rate	= $\frac{\text{Marriages}}{\text{Population}} \times 1,000$
Neonatal Mortality Rate	= $\frac{\text{Number of Neonatal Deaths}}{\text{Total Live Births}} \times 1,000$
Perinatal Mortality Rate	= $\frac{\text{Number of Perinatal Deaths}}{\text{Total Live Births plus Fetal Deaths}} \times 1,000$
Post-Neonatal Mortality	= $\frac{\text{Number of Infant Deaths - Neonatal Deaths}}{\text{Total Live Births}} \times 1,000$

VITAL STATISTICS SUMMARY

VITAL STATISTICS HIGHLIGHTS

POPULATION: Between 1950 and 1990, Nevada recorded the greatest percentage growth in the 40-year period (1,041,750 or 650.8 percent). It also had the greatest increase between 1980-1990 (402,649 or 50.4 percent). Nye County had the greatest population growth between 1980-1990 with 8,733 or 96.5 percent. Elko County followed with 16,261 or 94.2 percent. Clark County had a 60.1 percent increase, while Washoe had a 31.5 percent increase. Las Vegas is the largest city with 258,295; Reno next with 133,850; followed by Henderson with 64,942, and Sparks with 53,367. Age groups 0-12 make up 17.5 percent of the population; age group 12 thru 19 has 9.8 percent; age group 20-24 has 7.3 percent; age group 25-34 has 18.5 percent; 35-44 has 19.2 percent; 45-54 has 13.6 percent; 55-64 has 10.8 percent and age group 65+ has 12.7 percent.

There's 611,882 male population as compared to 589,951 women. The male population predominates over females up through age group 54. There's more females among the elderly 65 and over.

84.3 percent of Nevada's population is white, 6.6 percent is black, and 9.2 percent is all other races.

Residents of Hispanic origin numbered 124,419 in the state in 1990. Hispanics residents are broken out separately in this report from the figures for white and black to provide more information about Nevada's changing population.

BIRTHS: An estimated 4,179,000¹ babies were born in the United States during 1990, 4 percent more than 1989 (4,021,000) and the largest number since 1961. The birth rate was 16.7 live births per 1,000 population, 3 percent higher than the provisional rate of 16.2.

Nevada's birth and birth rate climbed to its highest since 1971. There was a total of 20,400 births in 1990 with a rate of 17.8 as compared to 9,650 births and a rate of 18.6 for 1971. The 1989 birth rate was 16.3 per 1,000 population.

Southern Nevada continues to lead the state in total births with 13,530 or 63.2 percent. University Medical Center with 3,731 births and Humana Sunrise with 3,577 births were the two leading hospitals. In the North, Washoe Medical Center had 3,346 births and St. Mary's Hospital had 2,307.

¹ The source for the National data is the National Center for Health Statistics, Vital Statistics of the United States and the Monthly Vital Statistics Report.

Elko General Hospital lead the rural counties with 665 births followed Carson Tahoe Hospital with 620 births.

LOW BIRTHWEIGHT BIRTHS: There were 1,627 low birthweight births in Nevada in 1990 as compared to 1,554 in 1989. Low birthweight is commonly defined as less than 2500 grams or less than 5 pounds 8 ounces. Even though the total low birthweight births increased in 1990, the percentage of total births decreased. The percentage of total births in 1990 was 7.6 as compared to 8.0 in 1989. As might be expected, women 14 to 19 years of age have slightly higher rates of low birthweight babies than those in the primary child bearing years (20-24). Women over 40, also demonstrates higher rates of low birthweight babies.

TEEN PREGNANCIES: In 1981 there was a total of 3,877 teen pregnancies (which is a combination of teen births, fetal deaths, and teen abortions) or 19.1 percent of total pregnancies. In 1990 there was a total of 3,879 teen pregnancies or 13.9 percent of total pregnancies.

ABORTIONS: In the United States, approximately 1.4 million legal abortions were reported to the Centers for Disease Control in 1989 (the latest data available). The abortion ratio² (reported abortions per 1,000 live births) reached its highest level of 364 per 1,000 live births in 1984; in 1989, the United States abortion ratio was 346 (preliminary data), down from 352 in 1988. In Nevada, the abortion ratio reached its highest level of 535.7 per 1,000 live births in 1980; in 1990, the ratio dropped to 330.5, down from 358.5 in 1989.

Current statistics disclose that out of the 7,226 abortion performed in Nevada in 1990, 86.2 percent were to whites, 25.9 percent to married women, 17.5 to teenage mothers (0-19 years), 10.2 percent had 3 or more previous abortions and 96.6 percent were performed using the suction curettage method.

DEATHS: In 1990, Nevada experienced a death rate of 8.6 per 1,000 population matching corresponding national rate of 8.6. Out of 10,348 deaths occurring in Nevada, 11.8 percent were for out of states residents.

INFANT DEATHS: In 1990, 38,100 infant deaths were reported in the United States. The infant mortality rate³ for 1990 was 9.1 per 1,000 live births, seven percent lower than the rate of 9.7 for 1989. This is the lowest United States rate ever recorded.

² CDC Surveillance Summaries, Centers for Disease Control, November 1991

³ The infant death rate is defined as the number of deaths to children under 1 year of age per 1,000 live births

The decline between 1989 and 1990 primarily reflect the decrease in the neonatal mortality rate from 6.2 in 1989 to 5.7 in 1990. In Nevada the rate had a slight increase from 8.1 in 1989 to 8.3 in 1990.

Prenatal care , which is defined as health care received in the nine months prior to birth of the infant, appears to be a major factor influencing the number of infant deaths. In 1989, 29 or 17.6 percent of the infant deaths received no prenatal care as compared to a low of 13 infants or 6.6 percent receiving no prenatal care in 1990.

As would be anticipated, the statistics also indicate that low birthweight plays a role in the number of infant deaths. We note that while only 8 percent of the total births in 1990 were low birthweight (5 pounds 8 ounces), 47 percent of the infant deaths were low birthweight babies.

DEATHS BY SELECTED CAUSE: The leading causes of death in Nevada remain the same for the first five causes and in the same order since 1987 (i.e., heart disease, neoplasms, accidents, respiratory disease, and cerebrovascular disease). In 1990, heart disease and cancer accounted for 55 percent of total deaths. Nationally, heart disease and cancer account for 57 percent of total deaths. Neoplasms in Nevada reached a high of 191.5 per 100,000 population in 1987, dropped to a low of 177.7 in 1989, and then back up to 190.3 in 1990.

Deaths due to respiratory disease became the number 4 cause of death in Nevada in 1987 and has remained there ever since. Respiratory disease consists of chronic obstructive pulmonary disease and its allied conditions of emphysema, asthma, and bronchitis. The rate of 51.3 for respiratory disease in 1990 is somewhat higher than the national rate of 35.5. Deaths from diabetes are calculated at 13.2 per 100,000 population as compared to the national rate of 19.5.

Nevada's accidental death rate remains among the highest in the nation and has always been its third leading cause of death. Nationally, it is the fourth leading cause of death. The 1990 rate for accidents is 54.4 per 100,000 population as compared to 53.0 in 1989.

SUICIDES: While there were 334 suicides in Nevada in 1990, the suicide rates vary from one year to the next. In 1976 the suicide rate was 25.2 per 100,000 population. In 1986 the rate was 27.1, in 1989 the rate was 25.3, and in 1990 the rate was 27.8. Nevada's rate is more than twice the National rate of 12.3.

Out of the 334 suicides for 1990, males account for 274 or 82.0 percent, while females had 59 or 17.7 percent. The highest age group was 20-40 years with 142 suicides or 42.5 percent. The age group 40-60 had 91 or 27.2 percent.

The age group 65+ had 67 or 20.1 percent. Teenagers accounted for 20 or 6.0 percent.

Firearms is the most common method used with 225 or 67.4 percent, followed by drugs with 37 or 11.1 percent, and by hanging with 27 or 8.1 percent.

MARRIAGES AND DIVORCES: Nevada's high marriage and divorce rates are the result of relatively lenient state laws that were designed to promote the state as a marriage capitol while making divorce easier than most states. In 1981, Nevada's marriage rate stood at 130 per 1,000 population and then dropped to 100 in 1990. The national rate in 1990 was 9.8.

Nevada's divorce rate has steadily decreased since 1970. In that year 18.7 divorces were decreed for every 1,000 population. In 1980, the divorce rate dropped to 17.3 and has been going down ever since. By 1990, the rate dropped to a all time low of 10.9 per 1,000 population. Meanwhile, the National divorce rate experienced a long steady increase that peaked in 1986 at 5.0 divorces per 1,000 population before dropping to 4.8 in 1987 and 1988. It dropped again in 1989 and 1990 to 4.7. A partial reason was the relaxation of divorce laws in other states which, in earlier years, drove couples to Nevada to dissolve their marriages.

**EACH DAY IN THE STATE OF NEVADA THERE ARE
APPROXIMATELY:**
